

# E-POULTRY PORTAL

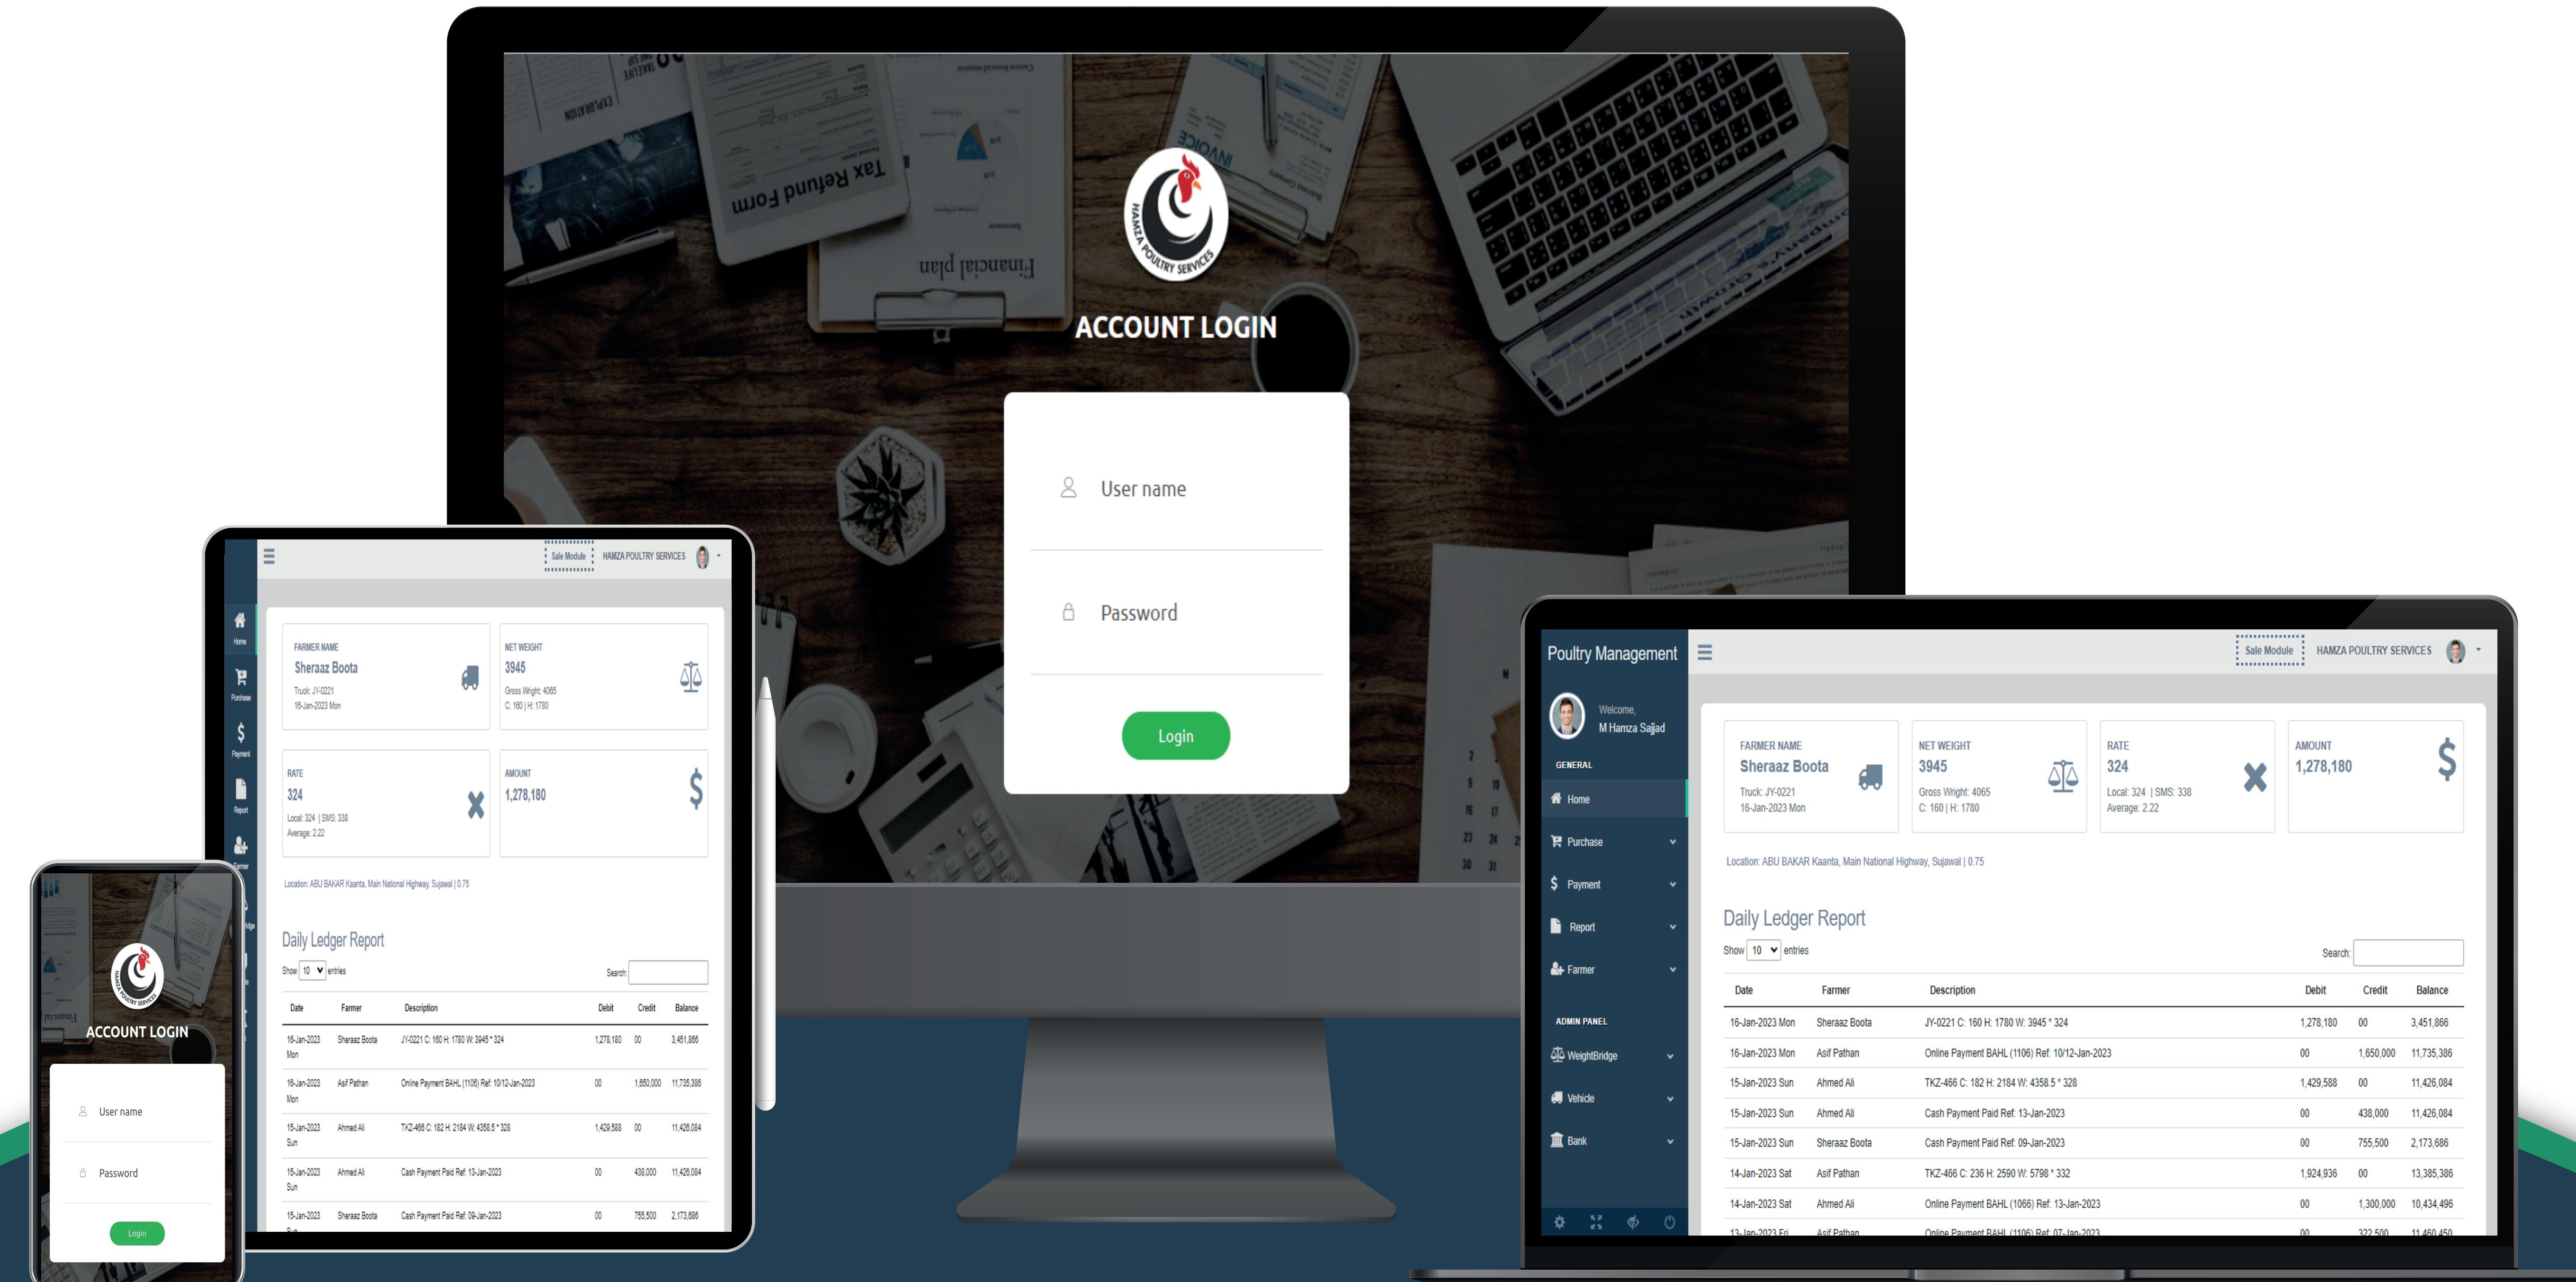

## **ABSTRACT:**

The basic idea for making this project is to provide a platform where users could do all of their manual work automatically. A poultry business that deals in purchasing & selling of chickens at wholesale and retail. Currently, there is no software to automate this business. They have been using Microsoft Excel for a long time but the files are getting larger and the systems are getting slower which is affecting them. They need an online web management system to maintain their records in a proper manner that can be accessed anytime anywhere online.

## **FEATURES:**

The user may keep track of each customer's ledger and manage all purchases and sales by creating invoices for all orders. In addition, the portal offers daily and annual profit/loss reporting.

## **TECHNOLOGY:** MICROSOFT .NET FRAMEWORK, Model-View-Controller (MVC), MS SQL SERVER

## **TEAM MEMBERS:**

**MUHAMMAD HAMZA SAJJAD  
MUHAMMAD RAUHAAN ARIF  
MOIZ AHMED SIDDIQUI**

## **SUPERVISOR:**

**MISS FOUZIA NAZ**
